How to factory reset zmodo camera zp-ibh15-w

You may want to factory reset the camera to: - Put the camera back to its default factory settings - Troubleshoot when the camera is not working properly To perform a factory reset of your camera: If your camera has a button This camera can be quite tricky to reset, please try some button tricks provided below to attempt to reset it. You can repeat the button tricks in order to get the camera into setup mode before proceeding with setup. Hold button for 20 seconds Wait 2 minutes for light to alternate amber/green If after 2 minutes the lights don't alternate, press button one quick time and immediately let off This will generally get the camera into setup mode. You may have to try that a few times. Once it is in setup mode you want to log off your app. Do not log in for this process, it allows you to choose "existing account" at the end of setup. Now you want to go to the settings of your phone and go to your WiFi lists. Zmodo 1080P IP Camera, WiFi Wireless Home Indoor Security Camera, with Pan/Zoom, Motion Tracker, Two-Way Audio, Activity & Sensor Alerts, Night Vision, Cloud Service Available - All-in-One Smart Hub, 3.6 out of 5 stars 63. \$100.00 \$ 100. Get it as soon as Mon, Oct 7. FREE Shipping by Amazon. Protecting yourself, your loved ones, and your home is important. This subreddit is a place where you can discuss it. Home security can be anything from a full blown monitored service and a surveillance system to simple things like having a double cylinder deadbolt on your front door. Any aspect about home security can be discussed here: alarms, surveillance, locks, personal protection, etc. Rules: Self posts are preferred over links. External links are permitted so long as they aren't spam, personal blogs, or memes. Do not use url shorteners. If you are linking to a specific product page provide the full, direct URL. Be gracious and up vote posts and comments liberally. Be polite. It's okay to disagree, but please refrain from being needlessly rude. Relevant subreddits: Not sure if I am posting in the right place here but we moved to a new place which had two ZP-IBH15-W Zmodo wifi only IP Cameras. I googled the model to find out how to reset them or get them on our new wifi network but besides, power on and look for the ZAPSMD network, there isn't much else out there on these. Right now when I plug it in the light inside the cover blinks green for a few seconds then blinks blue for a minute or so then back to green for a few seconds then back to blue for a minute. No ZMDSMD network ever shows up, the ZLink app can't connect to them either and I can't seem to find out what the colors mean or if these cameras are even working anymore. Anyone have experience resetting these models or know what the colors mean before I just toss em as trash?. Hi! I have this camera that seem bricked... Model #: ZP-IBH15-W After powering it, it ends up with the lights' solid blue (I know that means it is connected to a network), but I can't see it through scan (IPSearch, Zviewer) And can't add it to the NVR via Zmodo App on an iPhone. I have no idea on which network its connecting to! Edit: (Extra infos) I used computers wired or wirelessly connected to the same network that I'd like the cam to be connected to. The iPhone was connected to the same network as well. The router for all the cameras is the same, I am checking the logs and attached devices to it, and there is no presence of that rogue camera... Please advise! Thanks! I have same issue. Surely there is a way to reset camera to "virgin" state. Only diff for me was it was on another network first. now it wont connect to new router Well unfortunately from my experience you will need to figure out what network it is connecting to to reset it, it may be a dumb question but have you looked for the the original network it puts out on for the set up process ZMD_SAP ? it will not show up on your home network until you tell it to hook there via the ZLINK app ? power the camera up connect to that network launch the zmodo app add device via zlink and follow prompts . hopefully that helps it can be "reset" by deleting it from your Zmodo account (providing whatever network it is connected to is connected to the internet), then it miraculously resets back to stock. Crazy right? Wow let me try that out! Thanks @forsquiere! Hmm, it won't let me delete it. I clicked the trashcan, then "Proceed", afterward whenever I refresh, the cam is still there. Any clue Zmodo support? Could you erase it for me? EDIT : tried instead of user.zmodo.com then it let me delete the "bricked" camera there. Whenever I have a chance I'll try to reconfigure the cam, I'll keep you posted! Thanks Update, even if the camera was deleted (and not appearing anymore in user.meshare.com) when I connect it, it ends up with the solid blue lights on.!. ZBatch will reset all Zmodo devices on the network. Ask for it. It is possible to accidentally connect 1 camera to another camera. If you see ZMD_SAP visible in your WiFi list, check that. You can also unplug your router to see if the light goes blue. If the camera is on a functional network that allows it to connect to our servers, you can call support and we can try to send a reset signal. You would have to be at the location when you call. Another thing that people have done is to take the cameras over to a different location far away from whatever network the camera happens to be connected to, which will cause it to blink green again. Then you can connect the camera to a router at that location which will cause it to forget the network that it was connected to before. Then you can bring it back to the current location, and it won't connect to anything so you can run the setup again. Thanks @BeemerBiker and @Patty, interesting insights, I asked support for ZBatch and will look into those avenues ! Thank you! What did you get to work, if anything? I can't get any answers from customer support. My network changed and I can't get the cameras to 'unlock' from the old network. When I try the take it to another location method, mine still flashes blue then green then blue again. And the ZMD_SAP network will not show on my list. Greg21, not to kill all hopes, I've never got it to work neither. First of all, I want to say how pissed off I am that I had to wait a week for my account to be approved to post here, and since new I can't even make my own thread! I have to piggyback on this one! I also have the ZP-IBH15-W cameras, but my problem is this. A week ago I changed the SSID for my wireless network. I used Zviewer in an attempt to change which SSID the cameras would connect to, but when I told them to scan for networks, the list remained empty. It didn't even show the network they currently connected to. I honestly didn't think much of it because Zviewer is a near complete failure as a piece of software, so I just used it to issue a factory reset command to all my cameras. Now they are all flashing green and none of them are broadcasting the ZMD_SAP network for configuring the cameras. I've checked with four different devices, two phones and two computers. I've left them unpowered for nearly a week to see if that would help them finish resetting, but no dice. Now I have an NVR and four useess cameras. I read everything i could on nvr and everything else and apps. settled on blue iris as being the best app or program out there. so i bought it. and i can't get any of my cameras to work on it. I know i am not that dumb. please help. have i just bought the wrong cameras. any help out there. Thanks Tim Have you tried Find/Inspect in BI? If you know the IP of a cam, your BI pc should be on the same subnet, Enter IP, username and password. Then click Find/Inspect. How to add camera to BI that is not in the drop down list If all of those are Wifi, you're not going to be happy. Wifi is a poor choice for cameras. Those are junk cams, so good luck. I listen to too many people and that is why so many different camera. they would tell me that this was the best camera for them so i would by one or two of them then one person told me i needed to buy three together to make them work on bi. so should i start all over and stop trying to use bi or should i find out which cameras to buy that would work with BI. thanks for any help on the route i should go. thanks Tim I listen to too many people and that is why so many different camera. they would tell me that this was the best camera for them so i would by one or two of them then one person told me i needed to buy three together to make them work on bi. so should i start all over and stop trying to use bi or should i find out which cameras to buy that would work with BI. thanks for any help on the route i should go. thanks Tim anyone who told you to buy those cams is a kook... as mention Troubleshooting you could likely get most of them working, but there is a good chance your are improperly entering the settings, passwords, ip, ports etc
